

CAMERON COATINGS

ECONOMICAL SOLUTIONS
FOR A MULTITUDE OF
INDUSTRIAL COATING
PROBLEMS

- LOW FRICTION
- NON STICK
- ELECTRICAL INSULATION
- CHEMICAL RESISTANCE
- INERTNESS
- NON CONTAMINATION
- DECORATIVE
- ANTI CORROSION

A HOLSCOT GROUP COMPANY

Some of the industries enjoying the benefits of these coatings include:

Food Industry

Items such as sweet moulds, impression rollers, preparation trays can all be provided with a Food Approved, Non Stick, Easy Clean surface to provide a reduction in cleaning downtime.

Electrical Industry

Electrical windings, coils etc. can be coated with electrically insulating PTFE.

Chemical Industry

Many ECTFE and some forms of PTFE form corrosion resistant barriers on complex items such as valve bodies, agitators etc.

Medical Industry

The inertness of some specially developed coatings means that coated parts can be used in direct contact with the human body. Coated parts can also be safely autoclaved.

Offshore Industry

The corrosive effect of salt water can be prevented by coating. Such items as nuts and bolts are commonly coated to prevent failure from rusting.

Aerospace Industry

The electrical resistance properties of PTFE can be provided to small aircraft components.

Automotive Industry

The non stick and electrical insulation capabilities of PTFE are widely used within the car industry.

Printing/Converting Industries

The build up of sticky substances onto rollers and ancillary equipment can be minimised by the use of Non Stick PTFE coatings. PTFE surfaces on such items as ink traps can be completely cleaned eliminating the risk of contamination by colour inks.

Reprographic Industry

The use of PTFE coatings for fuser rollers on photocopiers is one of the most widely recognised applications for Fluoropolymer spray coatings.

Cameron Coatings are officially licensed applicators for

Xylan HALAR TEFLO[®]

Xylan is the registered trade mark of Fluorine Polymers. Teflon is the registered trade mark of DuPont Corporation.

HALAR is the registered trade mark of Halcon.
